Disminución de la reserva ovárica

- ALTO RIESGO

- Ciclofosfamida.
- Busulfan
- Melafan
- Clorambucil
- Mostaza nitrogenada

- RIESGO MEDIO

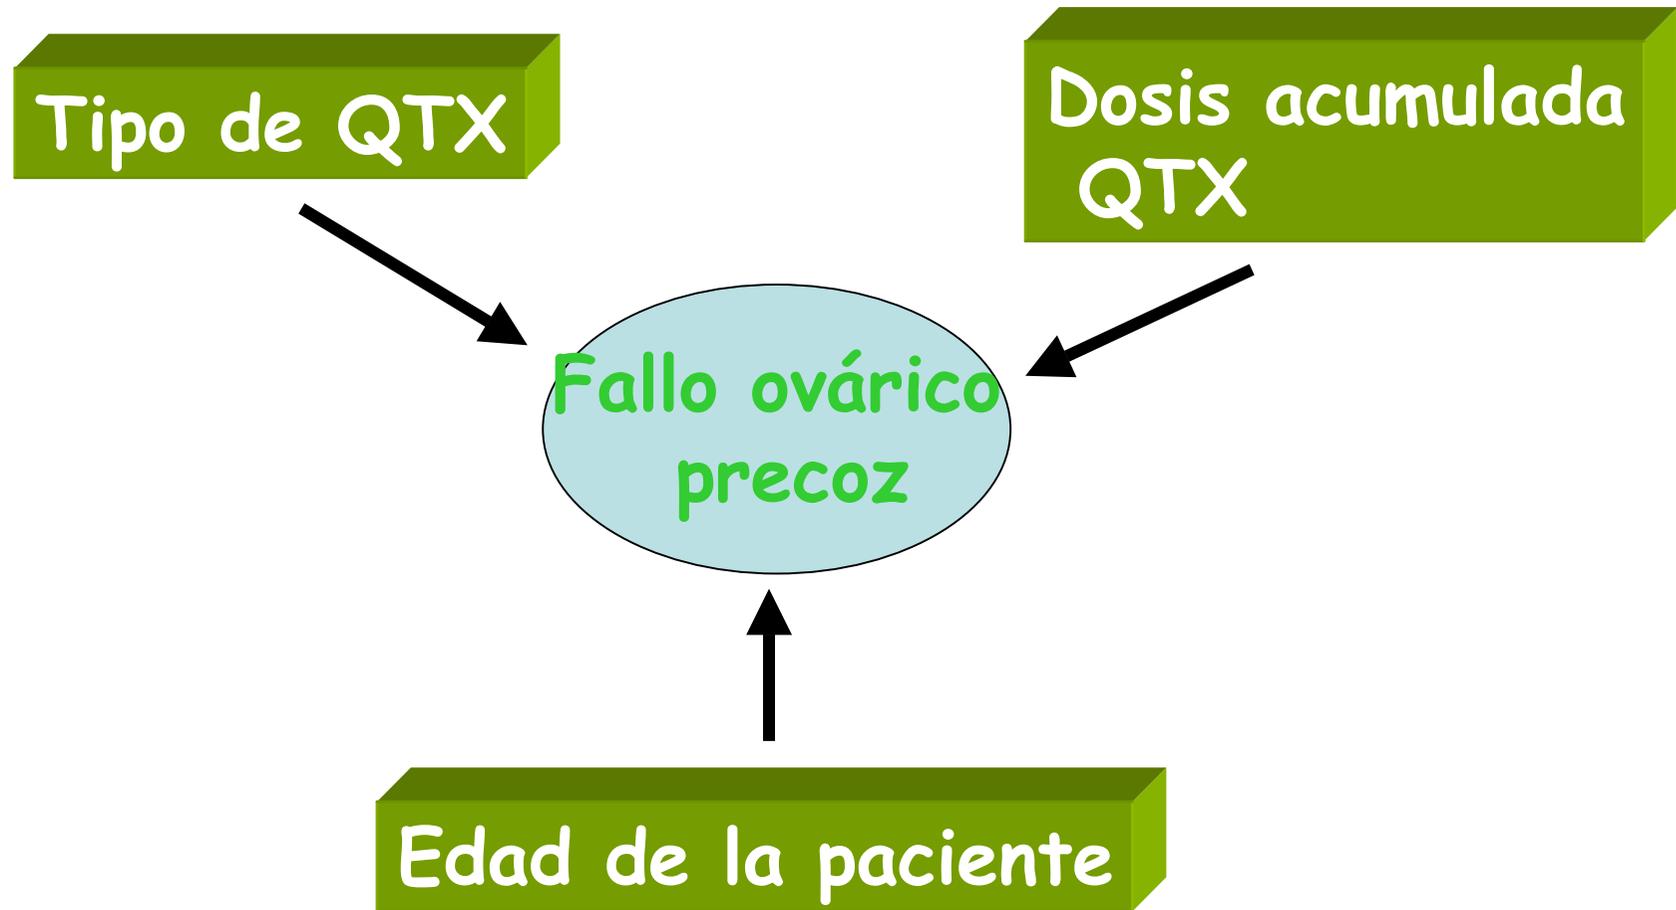

- Doxorubicina
- Cisplatino
- Carboplatino

- BAJO RIESGO

- Metrotexate.
- 5-Fluracilo
- Vincristina
- Bleomicina
- Adriamicina
- Mercaptopurino

Disminución de la reserva ovárica

QUE ES LO QUE LES PREOCUPA A LAS PACIENTES JOVENES CON CANCER DE MAMA EN EL FUTURO

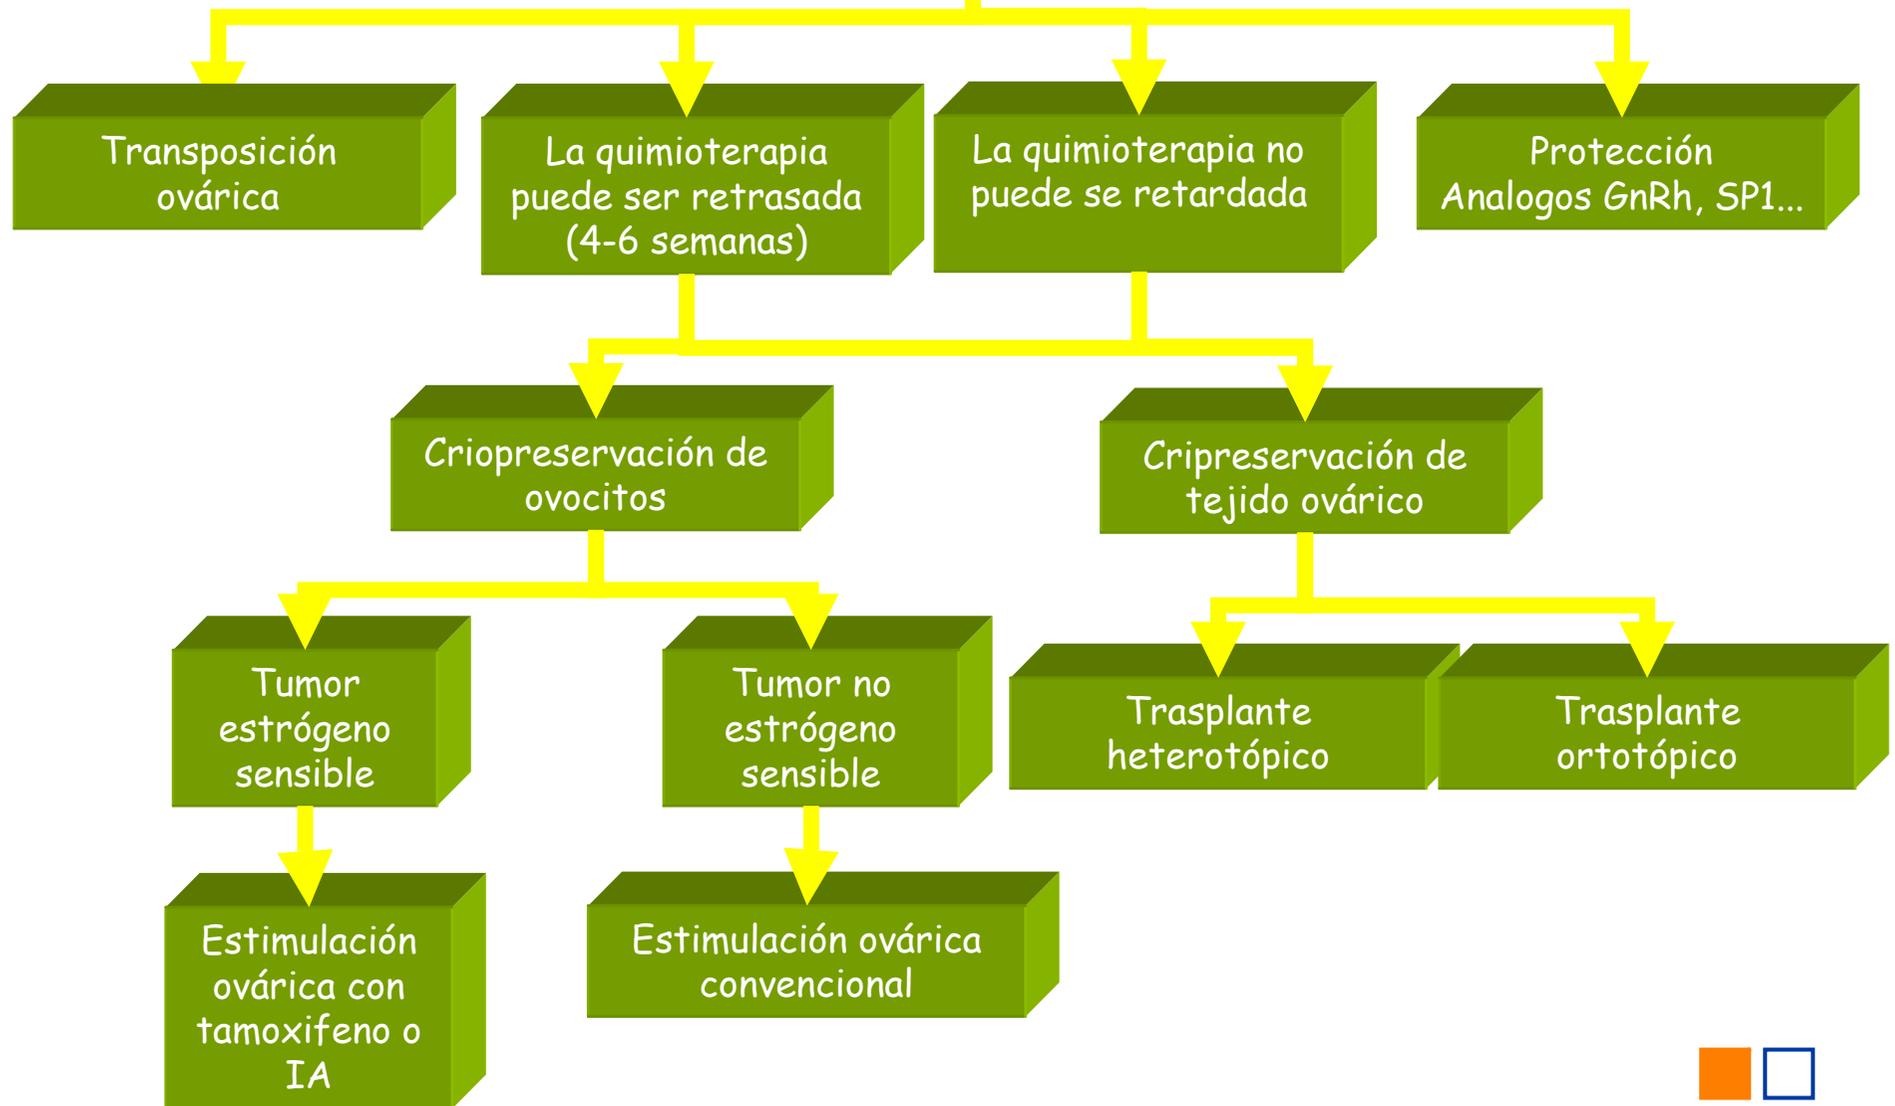

BOSTON CANCER INSTITUTE

- PATIENTS and METHODS: We developed a survey about issues for young women with a history of early-stage breast cancer. The survey was e-mailed to all registered Young Survival Coalition survivor members (N = 1,702). E-mail reminders were used

- CONCLUSION: Fertility after treatment is a major concern for young women with breast cancer. There is a need to communicate with and educate young patients regarding fertility issues at diagnosis and a need for future research directed at preserving fertility for young breast cancer survivors.

Riesgo de afectación ovárica

Vitrificación de ovocitos

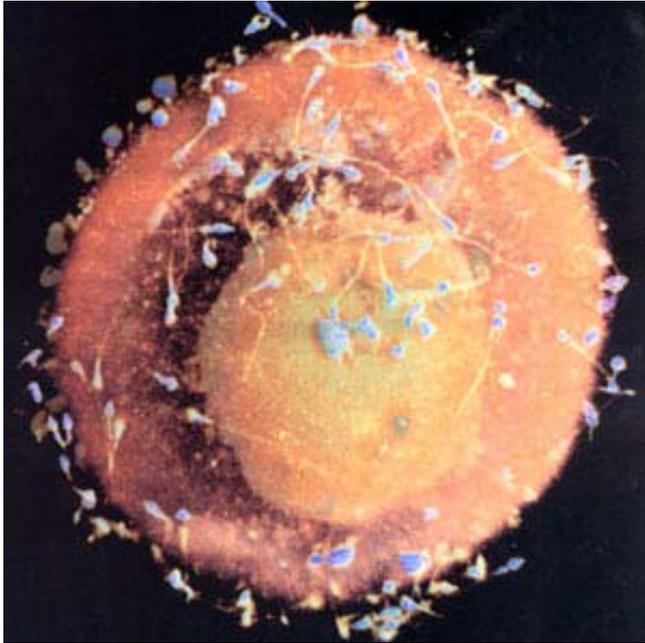

TABLE 2

Oocyte distribution, survival, and fertilization.

	Vitrified	Fresh	P value
MII oocytes No. (%)	231 (87.2)	219 (89.7)	.363
MI oocytes No. (%)	19 (7.2)	11 (4.5)	.203
GV oocytes No. (%)	15 (5.7)	14 (5.7)	.974
Survival No. (%)	224/231 (96.9)	—	
No. of injected oocytes	224	219	
Normal fertilization No. (%)	171 (76.3)	180 (82.2)	.128
Abnormal fertilization No. (%)	9 (4.0)	12 (5.4)	.469
Degenerated oocytes No. (%)	7 (3.1)	6 (2.7)	.809

Cobo. Clinical outcome of oocyte vitrification. Fertil Steril 2008.

¿qué limitaciones plantea la vitrificación de ovocitos?

- El tiempo para estimular a una paciente y obtener los ovocitos ha de ser reducido , para poder empezar pronto la quimioterapia o la radioterapia.
- Los niveles de estrógenos elevados podrían teóricamente empeorar el pronóstico y la supervivencia de las neoplasias hormonosensibles

Ciclo estándar de estimulación ovárica

Análogo GnRH

21 22 23 24 25 26 27 28

Inicio de la hiperestimulación en Fase Folicular Media

Treball recerca. Dra Sastre. Datos no publicados

Características basales

Parámetros	Total pacientes incluidas	Estimulación en fase Folicular tardía	Estimulación en fase Lútea
Edad	25,83 (+/- 3,71)	25,6 (+/-3,78)	26 (+/-3,95)
IMC	23,42 (+/-3,55)	22,6 (+/-2,6)	24,14 (+/-4,05)
FSH	6,92 (+/- 1,33)	7,05 (+/-1,53)	6,83 (+/-1,29)
RFA	11,50 (+/- 2,64)	12,80 (+/-3,56)	10,57(+/-1,39)

Duración del ciclo

Dosis total FSH	Fase Convencional	Fase Folicular tardía	p
	1680 +/-445	1595+/-300	0,500
Fase Convencional	Fase Lútea media	p	
	1966,67+/-559	1837,5+/-580	0,753

Días totales de estimulación	Fase Convencional	Fase Folicular tardía	p
	10,40+/-1,51	9,80+/-0,837	0,257
Fase Convencional	Fase Lútea media	p	
	12,2+/-1,92	10,6+/-2,07	0,221

Treball recerca. Dra Sastre. Datos no publicados

Ovocitos

Numero total de óvulos	Fase Convencional	Fase Folicular tardía	p
	24,8+/-13,02	19,20+/-11,12	0,141
Fase Convencional	Fase Lútea media	p	
17+/-7,93	18,40+/-10,64	0,892	

Numero ovocitos maduros	Fase Convencional	Fase Folicular tardía	p
	16,20+/-4,14	13+/-9,08	0,225
Fase Convencional	Fase Lútea media	p	
12,4+/-5,22	13,2+/-5,16	0,786	

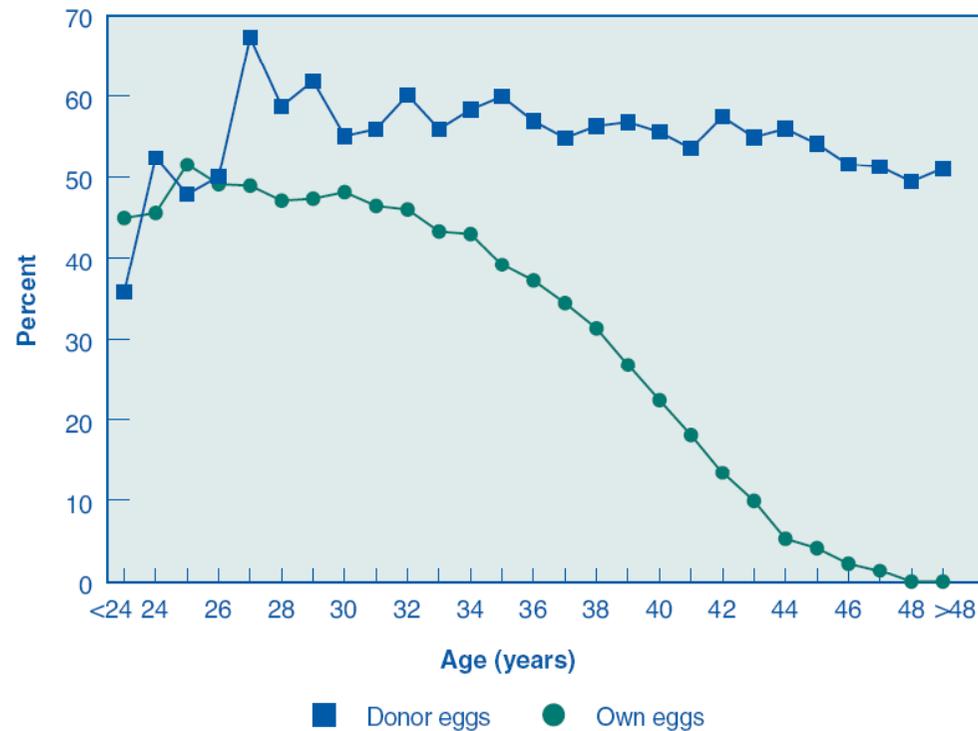

Treball recerca. Dra Sastre. Datos no publicados

Tasa de recién nacido vivo

Figure 45

Percentages of Transfers That Resulted in Live Births for ART Cycles Using Fresh Embryos from Own Eggs and ART Cycles Using Donor Eggs, by Age of Woman, 2007

IA estimulan la FSH

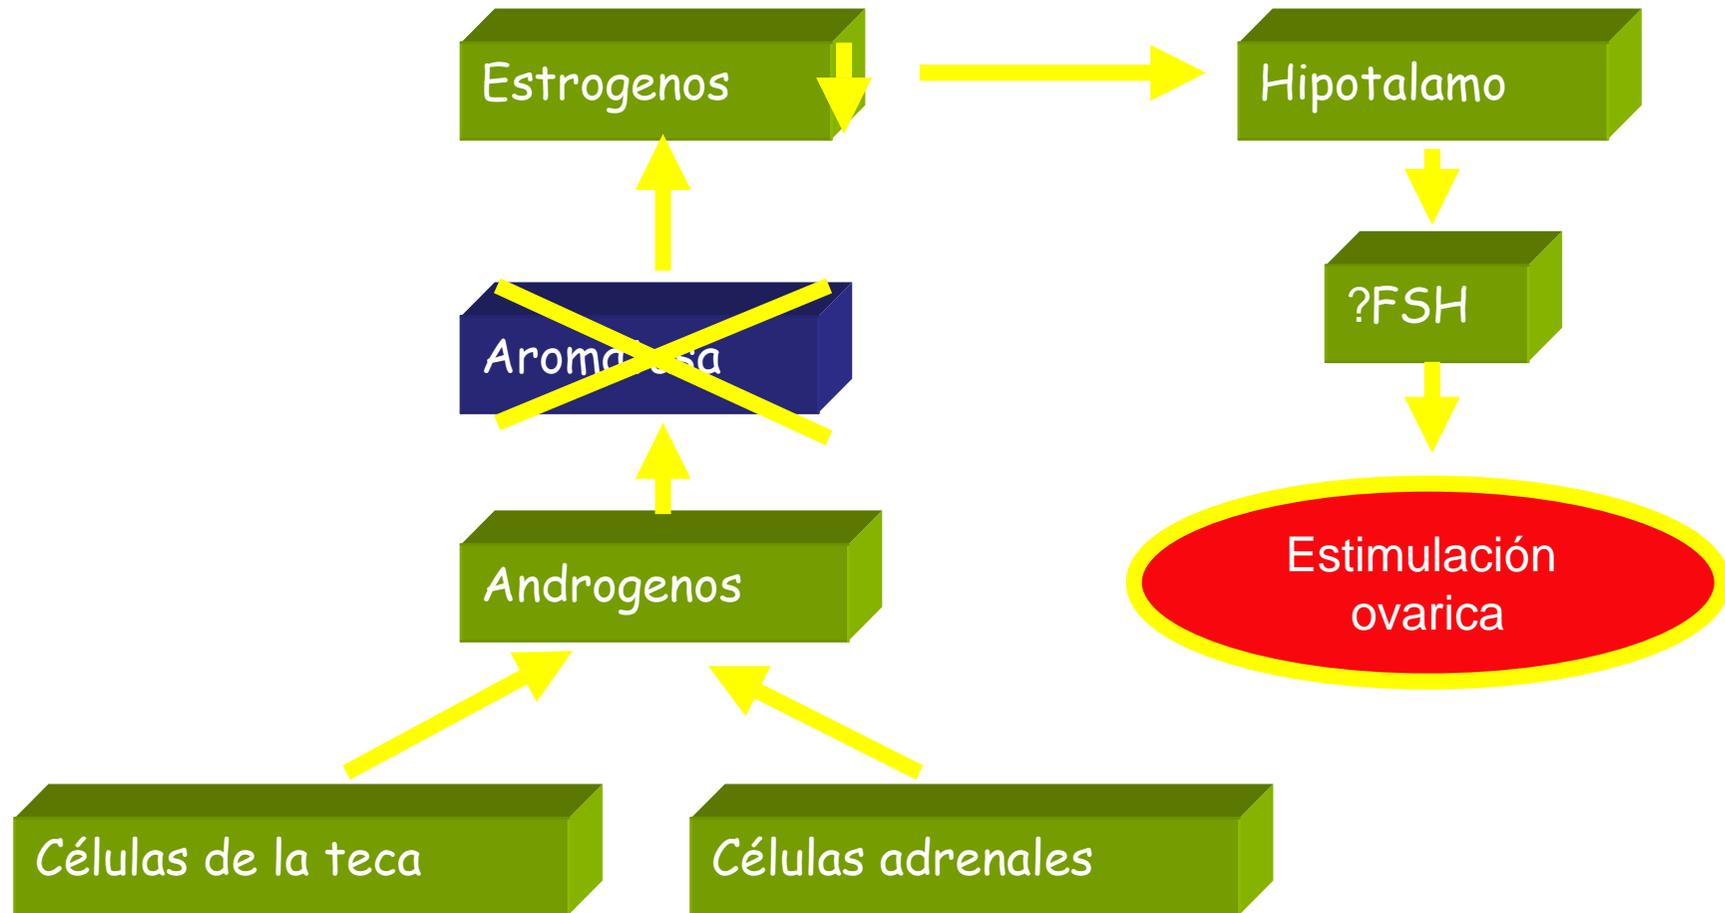

Table I. Characteristics of the patients.

Characteristics	Non horm. cancer (n=10)	Breast Cancer (n=9)	P- value
Age (years)	28 ± 4,13	32 ± 2,87	0,986
Parity	1 ± 0,31	0 ± 0	0,945
AFC ^a	14 ± 6,33	12,6 ± 5,38	0.435
AMH	2,30 ± 1,27	2,5 ± 0,43	0,615
Basal FSH (IU/ l)	4,34 ± 1,95	4,6 ± 1,89	0,592

Values are mean ± SD or number (%).
^a Antral follicle count. Total count, left + right ovary.

Table II. Outcomes according to intervention groups.

	non horm. cancer (n=10)	Breast cancer (n=9)	P-value
Stimulation days	11,1 ± 1,79	11,22 ± 0,66	0,575
Consumption of FSHr (IU)	2055 ± 565,90	2275 ± 484,60	0,810
Estradiol (pg/ ml) ^a	1666,4 ± 739,42	829 ± 551,11	0,006
Total oocyte retrivaled	15,4 ± 8,19	16,3 ± 7,31	0,601
Total oocyte vitrificated	11,5 ± 6,65	14 ± 5,59	0,804
Estradiol (pg/ ml) / oocyte	127,61 ± 57,47	55,50 ± 38,95	0,002

Values are mean ± SD or number (%).

^a Evaluated on the day of GnRh administration.

Tiempo en poder empezar la quimioterapia

- This retrospective analysis suggests that adjuvant chemotherapy is equally effective up to 12 weeks after definitive surgery but that relapse free survival and overall survival appear to be compromised by delays of more than 12 weeks after definitive surgery.(n2594)

Lohrisch C J ClinOncol. 2006 Oct 20;24(30):4888-94.

- The time periods from initial diagnosis to initiation of ovarian stimulation were 42.6 to 71.9 days

Lee et al., J ClinOncol. 2010 Nov 1;28(31):4683-6.

- El tiempo desde el diagnóstico a la vitrificación es de $24,3 \pm 6,7$ días grupo Neoplasia no hormono sensible vs. $36,2 \pm 12,3$ días grupo de cancer de mama (P= 0.991).
- El tiempo desde el inicio de la estimulación hasta la vitrificación es de $17,4 \pm 4,9$ días grupo Neoplasia no hormono sensible vs. $16,4 \pm 1,7$ días grupo de cancer de mama (P=0,294).
